Description

Modular „all-in-one“ continuous-row lighting system with integrated current-conducting profile. Future-proof system thanks to up to 12-pole wiring of the support profile. Power supply, light control and connection to an emergency system are thus realised in the simplest way possible. Thanks to our intelligent CLICK SYSTEM, seamless light tracks can be installed in a very short time and can always be readapted to spatial changes. Highly efficient and interchangeable light inserts with different beam characteristics offer the right solution for almost any application.
